#### DISC PAD

The Mirka backing pads are designed to meet the challenges set when performing demanding sanding and are suited for the random orbital sanders. In order to achieve the best performance and a good sanding result, it is important to combine the right sander with the right accessories. Disc pads are available in 3", 5" and 6" with PSA and Velcro backing.

#### HAND FILE 70X400MM

Mirka hand sanding file are especially designed for hand sanding with Abranet®, but can also be used in combination with other hook & loop products. The hand sanding blocks are connected to a dust extraction system by hose to ensure dust-free sanding.

#### HAND SANDING BLOCK

Mirka hand sanding blocks are especially designed for hand sanding with Abranet®, but can also be used in combination with other hook & loop products. The hand sanding blocks are connected to a dust extraction system by hose to ensure dust-free sanding. There are difference sizes available - 70x125mm, 70x198mm and

#### INTERFACE FOR DISC PAD

The interface and Abranet interface pads are used in combination with hook & loop sanding discs for sanding rounded surfaces and contours. The interface pad is placed between the base plate of the sanding machine and the sanding disc. Using the interface pad will also produce a softer result. The Abranet interfaces are designed for dust-free sanding with Abranet, whilst the interfaces are suitable for high-class sanding with other Mirka abrasives.

#### INTERFACE FOR HAND SANDING BLOCK

The interface and Abranet interface pads are used in combination with hook & loop sanding discs for sanding rounded surfaces and contours. The interface pad is placed between the base plate of the sanding machine and the sanding disc. Using the interface pad will also produce a softer result. The Abranet interfaces are designed for dust-free sanding with Abranet, whilst the interfaces are suitable for high-class sanding with other Mirka abrasives.

### PAD PROTECTION FOR ORBITAL SANDER

The pad saver discs are designed to protect the base plate of the sanding machine from wear and tear, when sanding aggressively and continuously with Abranet. These cost effective pad saver discs, positioned between the backing pad and the sanding disc, should be changed regularly and will prolong the life of the backing pad.
